**Attachments:** Nazaroff JESEE 2018.pdf

Hi Tina,

Bill Nazaroff just shared with me his perspective piece for the Journal of Exposure Science and Environmental Epidemiology. It has been accepted for publication and is now available in the "in press" section of the journal's website. It features the report Environmental Chemicals, the Human Microbiome, and Health Risk: A Research Strategy. It also mentions the Microbiome of the Built Environment report.

I ran an impacts report last week on our human microbiome report. It has a total of 4,397 full text downloads, which puts it in the top 5% of all National Academies Press products. I also ran an impacts report on Using 21<sup>st</sup> Century Science to Improve Risk-Related Evaluations. That report has a total of 8,428 full text downloads, which puts it in the top 2% of all National Academies Press products. I think that's pretty good since these report were not the highly controversial reports that seem to get all the attention!

Hope all is going well.

Ellen
